

**IP CAMERAS
LITE SERIES**

Resolution	2 MP	4 MP
Optics	2,8 mm	
Video compressor	Ultra 265, H.265, H.264, MJPEG	
Basic events	Motion Detection, Tampering Alarm, Audio Detection	Motion Detection, Ultra Motion Detection, Tampering Alarm, Audio Detection
Intelligent detection	Human Body detection	Smart Functions: Cross line, Intrusion (based on Human Body Detection)
Audio	Integrated microphone	
IP and compatibility	IP67 – ONVIF Profile S – NDAA	

**IP CAMERAS
PRO SERIES**

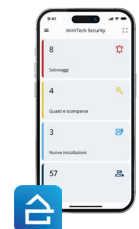

Resolution	4 MP		
Optics	2,8 mm	2,7 – 13,5 mm motorized AF	2x 4 mm, 160°
Video compressor	Ultra 265, H.265, H.264, MJPEG		
Basic events	Motion Detection, Ultra Motion Detection, Tampering Alarm, Audio Detection, People Counting, Face Detection		Motion Detection, Tampering Alarm, Audio Detection
Intelligent detection	Deep Learning Function: Cross line, Intrusion, Enter Area, Leave Area (basati su Human Body Detection, Motor Vehicle e Non-Motor Vehicle)		Human Body detection
Audio	Integrated microphone	Integrated microphone and speaker	1 Input 1 Output Integrated microphone
IP and compatibility	IP67 – ONVIF Profile S – NDAA		

Network Video Recorder

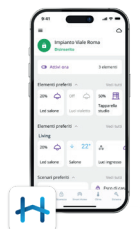

IP Video Inputs	4 PoE	8 PoE	16	16	32	16 PoE
HDD	1, max 6 TB		1, max 8 TB	2, max 8 TB x HDD		
Recording	8 MP (Dual Stream)			16 MP (Dual Stream) IPC Fisheye support		
Intelligent event detection	Intrusion Detection, Cross Line Detection, Enter Area, Leave Area			Intrusion Detection, Cross Line Detection, Enter Area, Leave Area, Video Metadata		
Alarms	Motion Detection, Ultra Motion Detection, Tampering, Human Body Detection, Video Loss, Alarm Input, Audio Detection, invio stringhe HTTP (on various types of events)					
IN/OUT Alarms	-			8 Inputs – 2 Outputs		
Compatibility	ONVIF Profile S					

InVista integration
The intelligent Inim CCTV system

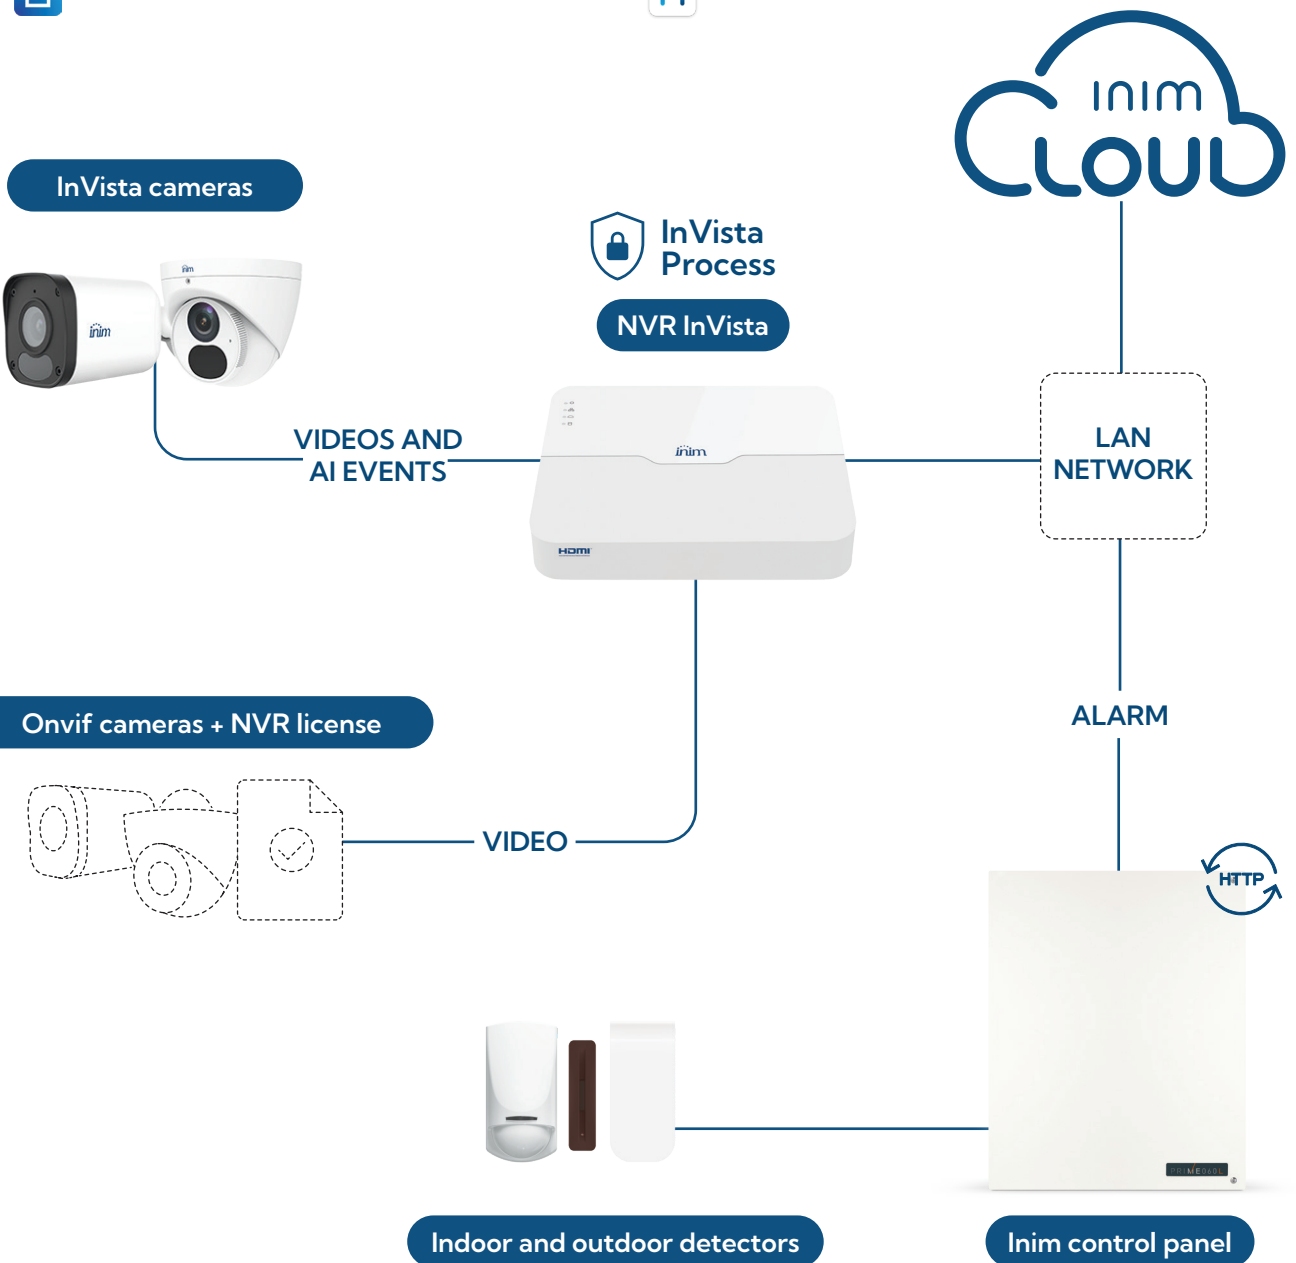

InimTech Security

- NVR Enrollment
- Association between NVR and control panel
- Association of cameras and zones

Inim Home

- Notifications with images
- Pre/post alarm
- Video event timeline
- Live cameras
- Playback

The InVista system, in the presence of a Prime series control panel on the local network, manages HTTP/HTTPS events from third-party cameras.

The dedicated software inside the InVista NVRs guarantees the exchange of data only with Inim Cloud on European servers.

InVista®

The integration you were waiting for, the eye to the future.

InVista®

InVista is the new system that integrates the power of video surveillance with the effectiveness of our anti-intrusion solutions, offering unprecedented protection. **At the core of it all is Inim Cloud**, the focal point of the entire InVista system.

Protected market

The system is part of the exclusive Inim "Identified Installer" program, drawn up to give value to and protect the expertise of specialized installers, guaranteeing them the exclusivity of the product on the market.

Secure data

Images and videos are stored only with the consent of the user and exclusively on European servers owned by Inim, thus guaranteeing compliance with European privacy regulations.

Do everything from the App

It is possible to manage the entire system solely from the App. InimTech Security allows quick activation via QR code, while Inim Home offers complete control of video surveillance, security and home-automation features.

Feature-rich IP cameras and NVRs work together to provide intelligent detection based on video analytics.

The IP cameras from the **Inim LITE series** offer advanced video processing and intelligent detection technologies. They guarantee high resolution images and excellent 24/7 performance for both indoor and outdoor environments. Ideal for residential, commercial and industrial installations. They are NDAA compliant and support Onvif protocol.

The IP cameras from the **PRO series**, with their higher resolution and advanced features, take video surveillance to a more notably professional level. Equipped with intelligent recognition technologies based on deep learning, they offer clear images in all lighting conditions. Like the LITE series they are NDAA compliant and support Onvif protocol.

The **Inim range of Network Video Recorders (NVRs)** is effective and complete, designed to offer optimal management of surveillance cameras. The functions of searching and accessing video recordings are simplified and intuitive thanks to the Smart Search function and support of HTTP string sending to Inim alarm control panels. These NVRs are also NDAA compliant and support Onvif protocol.

A professional video surveillance system and all from the App

InVista is intuitive and effective. With a few configuration steps the system offers advanced video verification features and immediate management. With the InimTech Security App the installer can enroll with ease NVRs via QR code and associate them with existing Inim intrusion-control panels as well as with new systems.

The Inim Home App allows the user to manage all the video verification functions of the InVista system:

Real time display and playback

Pre/post alarm display

Video event timeline

Reception of notifications with images

Cloud video backup

HTTP/HTTPS API management

Cloud video event backup: InVista allows the management and transmission of pre-alarm and post-alarm video events. These are stored on the Cloud for a set period of time, thus ensuring the availability of crucial recordings also in the event of theft or damage to the NVR. In this way, data security is always guaranteed.

One App for control with no limits

The **Inim Home App** represents a revolution in management from a single device of video surveillance, intrusion detection and home-automation systems. Directly from your smartphone and with just a few steps it is possible to:

- Manage the video surveillance system
- Arm and disarm the security alarm
- Control home-automation functions
- Regulate the air conditioning of rooms
- Customize security and home-automation scenarios
